Subject: Fwd: public comment on federal registercdc  
cant be trusted not to  
politicize disease to make money for themselves or their  
pals in big  
pharmac

cdc is so incompetent it tells the public to go to  
regulatoins.gov, to commetn and when you go there to  
comment, neither the fed register notice or the special  
notice comesup with an oppourtunity to commnt. t  
his agency is so very very negligent. it cant be trusted for  
any accumulation of date. this is another  
example. this happens all of the time with the cdc notices at  
teh federal eregister.

this agency acts politically and not honestly in its collection  
of data. it wants to encourage vaccinations so  
it incorrectly labels causes of death in its acocunts of deaths  
that it politically influences. the public has  
no faith in this agency where the employees hide out from  
public questionining on their findings. this  
agency is the pits. it needs to be shut down. we need to  
start fresh with a new agency. this is the corrupt  
federal fat cat bureaucratic swamp at the cdc. it simply cant  
be trusted at all. ineffecient ineffective,  
corrupt, negigent it all applies. i dont trust it to collect any

information at all on any health. i have seen its actions ove the past ten years. it isnt pretty. this comment is for the public record please receipt. jean publiee jeanpublic1@yahoo.com

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day-17-0728; Docket No. CDC-2016-0119]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

---

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing efforts to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. This notice invites comment on the National Notifiable Diseases Surveillance System (NNDSS). The NNDSS is the nation's public health surveillance system that monitors the occurrence and spread of diseases and conditions that are nationally notifiable or under national surveillance.

DATES: Written comments must be received on or before February 21, 2017.

ADDRESSES: You may submit comments, identified by Docket No. CDC-2016-0119 by any of the following methods:

Federal eRulemaking Portal: Regulations.gov. Follow the instructions for submitting comments.

Mail: Leroy A. Richardson, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS-D74, Atlanta, Georgia 30329. Instructions: All submissions received must include the agency name and Docket Number. All relevant comments received will be posted without change to Regulations.gov, including any personal information provided. For access to the docket to read background documents or comments received, go to Regulations.gov.

Please note: All public comment should be submitted through the Federal eRulemaking portal (Regulations.gov) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact the Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS-D74, Atlanta, Georgia 30329; phone: 404-639-7570; Email: omb@cdc.gov.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501-3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved collection before submitting the collection to OMB for approval. To

comply with this requirement, we are publishing this notice of a proposed data collection as described below. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

#### Proposed Project

National Notifiable Diseases Surveillance System (OMB Control Number 0920-0728, expires 1/31/2019)--Revision--Center for Surveillance, Epidemiology and Laboratory Services, CSELS), Centers for Disease Control and Prevention (CDC).

#### Background and Brief Description

The Public Health Services Act (42 U.S.C. 241) authorizes CDC to

disseminate nationally notifiable condition information. The Nationally Notifiable Diseases Surveillance System (NNDSS) is based on data collected at the state, territorial and local levels as a result of legislation and regulations in those jurisdictions that require health care providers, medical laboratories, and other entities to submit health-related data on reportable conditions to public health departments. These reportable conditions, which include infectious and non-infectious diseases, vary by jurisdiction depending upon each jurisdiction's health priorities and needs. Infectious disease agents and environmental hazards often cross geographical boundaries. Each year, the

[[Page 93940]]

Council of State and Territorial Disease Epidemiologists (CSTE), supported by CDC, determines which reportable conditions should be designated nationally notifiable and voluntarily submitted to CDC so that information can be shared across jurisdictional boundaries and both surveillance and prevention and control activities can be coordinated at regional and national levels. CDC requests a three-year approval for a Revision for the National Notifiable Diseases Surveillance System (NNDSS), OMB Control No. 0920-0728, Expiration Date 01/31/2019. This Revision includes requests for approval to receive: (1) Case notification data from the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau (independent nations that operate under a Compact of Free Association with the United States of America that are commonly referred to as ``freely associated states"); (2) case notification data for histoplasmosis which is now under standardized surveillance; and (3) case notification data for all enteric Escherichia coli infections should any of them become nationally notifiable or be placed under standardized surveillance. CDC already has approval to receive case notification data for Shiga toxin-producing Escherichia

coli (STEC) which is nationally notifiable. Although this Revision includes case notifications that were not part of the last NNDSS Revision, the estimate of the average burden per response based on the burden tables from all of the consolidated applications for states, cities, and territories has not changed. The addition of new diseases and conditions, should they become nationally notifiable or be placed under standardized surveillance, will not increase the burden since most case notifications are submitted from already existing databases. The burden on the states and cities is estimated to be 10 hours per response and the burden on the territories is estimated to be 5 hours per response. The total burden will increase because of the request to receive case notification data from the freely associated states. The burden on the freely associated states is estimated to be the same as the burden for the territories, 5 hours per response. This is because the methods and systems that the freely associated states use to send case notification data to CDC are nearly the same as the territories. There will be no costs to respondents other than their time. The estimated annual burden is 29,120 hours.

#### Estimated Annualized Burden Hours

Number
